OVERVIEW OF NURSING COURSES For Incoming Classes Fall 2017

NURS 0101 Introduction to Professional Nursing (2)

Introduces the beginning student to the nursing profession, providing both an historical perspective and a focus on the current state of the nursing profession and its alignment with the most recent trends in healthcare. Topics will include introduction to nursing informatics with a focus on acquiring and ethically using obtained knowledge and an introduction to the resources that are available to nursing students to assure their success.

NURS 0200 Health Assessment and Promotion (3)

Introduces health assessment and wellness concepts. The focus of this course is on the development of beginning skills in assessing the health of adults and older adult patients with an emphasis on physical examination and techniques and clinical decision making based on findings. Topics include the multitude of variables that contribute to wellness, the use of the nursing process, interacting with clients using appropriate communication skills, taking an accurate health history and establishing an appropriate data base using current informatics for correct documentation of obtained information.

NURS 0210 Current Principles of Professional Nursing (4)

Examines the underlying theoretical concepts and expands on prior knowledge and skills from the sciences and the humanities. The core focus is on utilizing the nursing process and evidence based practice to provide quality, individualized, compassionate, and safe care to adult and older adult patients and their families. Competency in the use of basic nursing skills and health teaching are key elements integrated into the clinical laboratory setting.

NURS 0220 Nursing Pharmacology (3)

Focuses on the chemical and physical characteristics of therapeutic drugs as well as their physiological impact on clients of all ages. General principles of pharmacology and the key categories of commonly used drugs to treat a broad range of pathophysiological conditions will be included. The therapeutic use of drugs essential for current nursing practice will be examined. Clinical, legal and ethical decision making related to drug administration will be covered.

NURS 0300 Nursing Care of the Adult and Older Adult (9)

Focuses on the care of adult and older adult patients and their families in more acute care settings. Content includes using critical thinking to make appropriate clinical decisions for developing and implementing evidence based professional nursing interventions to achieve appropriate patient outcomes. The integrating of theoretical and clinical knowledge in the care of adults/older adults with acute and chronic illness, synthesizing laboratory data, and the setting of priorities will be incorporated.

NURS 0305 Nursing Research (3)

Focuses on nursing research and its impact on evidence based nursing practice. Addresses research terminology, defining researchable nursing problems, identifying variables, hypothesis development and testing and sample selection as well as evaluation of findings. A major component of this course will be discussion of the nurse as the consumer of research. Additionally, the utilization of critical thinking skills will be emphasized to analyze research findings. Students also will be encouraged to explore nursing research that addresses clinical problems in their own nursing practice

NURS 0310 Community Health Nursing (5)

Identifies current nursing concepts and focuses on their application in public health and community settings with individuals, families and at-risk populations. The dynamics of health promotion and prevention as impacted by global, societal and cultural influences will be explored. A variety of community agencies will be utilized.

NURS 0315 Psychiatric Nursing (5)

Focuses on the provision of nursing intervention to clients experiencing mental health issues. In addition to theoretical and clinical exposure to a broad range of psychiatric conditions, the connection of mind-body, the importance of coping skills and stress management will be explored. Interpersonal skill development and clinical decision making with this population will be emphasized.

NURS 0320 Nursing Care of Women and Children (7)

Focuses on nursing interventions to support the holistic health needs of women and children from conception to mid-life. The course will stress the use of critical thinking skills to meet the physiological and psychological needs of emerging families and will provide opportunities to care for these clients in different venues across the wellness-illness continuum.

NURS 0350 Advanced Principles of Professional Nursing (3)

Builds on previous nursing concepts, focusing on the sophisticated use of the nursing process and critical thinking to provide safe, skilled, ethical nursing care to patients with serious complex physiological conditions.

NURS 0355 Nursing Leadership (3)

Focuses on the role of the professional nurse in a leadership/management position. The course examines how the professional nurse works collaboratively within the structure of a healthcare organization. Emphasis will be on leadership and organizational theories and their relationship to managing people, positive problem solving/decision making, conflict resolution, appropriate delegation and effective communication with all members of the health care team. The use of self-assessment to facilitate the development of leadership/management skills will be incorporated.

NURS 0360 Preparation for Professional Licensure (1)

Focuses on study strategies, test-taking skills and content review to assist in preparing for the NCLEX- RN licensure examination. Included will be NCLEX-RN practice tests to reinforce prior learning and to enhance testing abilities.

NURS 0397 Nursing Capstone Clinical Internship (6)

Provides an opportunity to assume a professional nursing role under the auspices of a qualified nurse preceptor. This capstone experience focuses on synthesizing advanced nursing concepts and utilizing complex decision making in an individualized clinical environment. Emphasis will be on preparing to transition to competent and confident beginning professional practice.

OVERVIEW OF NURSING COURSES Beginning for Students Fall 2018, Fall 2019, Fall 2020

NURS 0100 Introduction to Professional Nursing (3)

Introduces the beginning student to the nursing profession, providing both an historical perspective and a focus on the current state of the nursing profession and its alignment with the most recent trends in healthcare. Topics will include introduction to nursing concepts with a focus on acquiring and ethically using obtained knowledge and an introduction to the resources that are available to nursing students to assure their success.

NURS 0201 Fundamentals of Professional Nursing Practice (6)

This course examines the underlying theoretical concepts and expands on prior knowledge and skills from sciences and the humanities. The core focus is on utilizing the nursing process, health assessment techniques and evidence based practice to provide quality, individualized, compassionate and safe care to the adult/older adult populations and their families. Competency in the application of basic nursing skills and safety are key elements integrated into the clinical and simulation/laboratory settings.

NURS 0311 Community Health Nursing (4)

Identifies current nursing concepts and focuses on their application in public and community settings with individuals, families, and at-risk populations. The dynamics of health promotion and prevention as impacted by global, societal and cultural influences will be explored. A variety of community agencies will be utilized.

NURS 0316 Psychiatric Nursing (4)

Focuses on the chemical and physical characteristics of therapeutic drugs as well as their physiological impact on clients of all ages. General principles of pharmacology and the key categories of commonly used drugs to treat a broad range of pathophysiological conditions will be included. The therapeutic use of drugs essential for current nursing practice will be examined. Clinical, legal and ethical decision making related to drug administration will be covered.

NURS 0312 Nursing Care of the Adult and Older Adult I (5)

This is the first of two courses that focuses on the care of the adult and older adult patient with acute and/or chronic illness. Content includes using critical thinking to make appropriate clinical decisions for developing and implementing evidence based professional nursing interventions to achieve appropriate patient outcomes. The integrating of theoretical and clinical knowledge in the care of adults/older adults with chronic illness, synthesizing laboratory data, and the setting of priorities will be incorporated. This course addresses relevant criteria of the AACN *Essentials of Baccalaureate Education # I, III, IV and IX* (see <https://www.aacnnursing.org/Portals/42/Publications/BaccEssentials08.pdf>).

NURS 0335 Pathophysiology and Pharmacology I (3)

This course explores major elements of altered disease processes at the cellular, tissue, and organ levels and the pharmacological agents used to treat, manage, prevent or cure diseases across the lifespan. The course will address the pathological changes in the body and integrate this knowledge with pharmacological therapy and safe medication management. Clinical, legal and ethical decision making related to drug administration will be covered.

NURS 0305 Nursing Research (3)

Focuses on nursing research and its impact on evidence based nursing practice. Addresses research terminology, defining researchable nursing problems, identifying variables, hypothesis development and testing and sample selection as well as evaluation of findings. A major component of this course will be discussion of the nurse as the consumer of research.

Additionally, the utilization of critical thinking skills will be emphasized to analyze research findings. Students also will be encouraged to explore nursing research that addresses clinical problems in their own nursing practice.

NURS 0313 Nursing Care of the Adult and Older Adult II (5)

This course focuses on the care of the adult and older adult patient with acute and/or chronic illness. Building on Nursing Care of the Adult and Older Adult I, content includes critical thinking and problem solving strategies for adults with acute and complex illnesses or injury. A systems approach is utilized to analyze, intervene, and care for alterations to health with the individual and family of culturally diverse backgrounds. This course will critically analyze the use of the nursing process while implementing care to individuals experiencing acute illness. This course addresses relevant criteria of the AACN *Essentials of Baccalaureate Education # I, III, IV and IX*

(see <https://www.aacnnursing.org/Portals/42/Publications/BaccEssentials08.pdf>).

NURS 336 Pathophysiology and Pharmacology II (3)

This is the second of two courses that explores the major elements of altered disease processes at the cellular, tissue, and organ levels and the pharmacological agents used to treat, manage, prevent or cure diseases across the lifespan. The course will build upon concepts taught in Pathophysiology and Pharmacology I and will continue to address the pathological changes in the body and integrate this knowledge with pharmacological therapy and safe medication management. Clinical, legal and ethical decision making related to drug administration will be covered.

NURS 0321 Nursing Care of Children and Families (4)

Emphasis is on the development of clinical decision making skills related to nursing care of childrearing families with a particular focus on anticipatory guidance, prevention, intervention and health restoration. This course will also provide experience in clinical and simulation learning environments for the application of theory from nursing and related disciplines to child health. The course will stress the use of critical thinking skills to meet the physiological and psychological needs of emerging families and will provide opportunities to care for these clients in different venues across the wellness-illness continuum.

NURS 0322 Nursing Care of Perinatal Women and Newborns (4)

Focuses on nursing interventions to support the holistic health needs of women and newborns from conception to postpartum and includes women's health reproductive topics. The course will stress the use of critical thinking skills to meet the physiological and psychological needs of emerging families and will provide opportunities to care for these clients in different venues across the wellness-illness continuum.

NURS 0355 Nursing Leadership (3)

Focuses on the role of the professional nurse in a leadership/management position. The course examines how the professional nurse works collaboratively within the structure of a healthcare organization. Emphasis will be on leadership and organizational theories and their relationship to managing people, positive problem solving/decision making, conflict resolution, appropriate delegation and effective communication with all members of the health care team. The use of self-assessment to facilitate the development of leadership/management skills will be incorporated.

NURS 0350 Advanced Principles of Professional Nursing (3)

Builds on previous nursing concepts, focusing on the sophisticated use of the nursing process and critical thinking to provide safe, skilled, ethical nursing care to patients with serious complex physiological conditions.

NURS 0360 Preparation for Professional Licensure (1)

Focuses on study strategies, test-taking skills and content review to assist in preparing for the NCLEX- RN licensure examination. Included will be NCLEX-RN practice tests to reinforce prior learning and to enhance testing abilities.

NURS 0397 Nursing Capstone Clinical Internship (6)

Provides an opportunity to assume a professional nursing role under the auspices of a qualified nurse preceptor. This capstone experience focuses on synthesizing advanced nursing concepts and utilizing complex decision making in an individualized clinical environment. Emphasis will be on preparing to transition to competent and confident beginning professional practice.
