

Computer Graphics I

2008

“The shadow of your smile.”

B. Keim

This art core course provides an introduction to the spectrum of computer graphics. Students will become acquainted with the diverse nature of the topic and become aware of the range and scope of industry standard software applications used for creating art. An overview of the history of the field along with research assignments, as combined with the creation of digital art projects in an online forum will be experienced. A final portfolio of all the unit projects will be created by each student.
